Electrical Contractor:

Denier Electric Co., Inc.

Project Description

This 245,000 square foot, two-story building consolidated the credit card service operations from several existing facilities. Instrumentation that controls two utility services and four diesel generators along with 180 storage batteries ensures that the facility will never be without electrical power. The facility is design to accommodate 3000 customer service representatives with office, food service, exercise and data processing areas.
